

Project name: Budget Management System

Date: November 2024 (L3)

Group Members: Mael LECARPENTIER, Florian LEROUX, Lucas NGUYEN

Project goal:

Create a Java-based budget tracking application to manage shared expenses in a group context (e.g. vacations, roommates). The system aims to simplify tracking, reporting, and reimbursement management.

Skills and technologies used:

- Java
- MariaDB / SQL
- Git, Visual Studio Code

Features developed:

- Record and view shared and personal expenses
- Generate group and individual reports
- Distribute costs automatically
- Modify or delete transactions

Possible improvements:

- Mobile-friendly version
- User login system

My responsibilities:

- Setup and management of the Git repository
- Definition of functional requirements
- Development of the report generation module
- Debugging and final testing
